3 BACKROUND

The digitisation of the diagnostic platforms is one of the innovative goals defined by the NHLS. There has been much discussion around the reasons for adopting a digital diagnostics platform, the feasibility of the project in a resource constrained setting and the wish to remain in line with the international standard of best practice. The current motivation in discussion for digitisation of the NHLS diagnostic platform, is for the purpose of work redistribution from underserviced to adequately serviced regions, so as to improve service delivery. This also provides a platform for digital referral of samples to sub-specialist pathologists and provides a resource for storage of cases for further review, for research and for training purposes.

Digital pathology implies WSI ("virtual microscopy"). To achieve the benefit of DP, 3 components are necessary for successful implementation of a DP solution:

- 1. Image Acquisition.
- 2. Image Storage.
- 3. Case Organization (editing and display of images).

In addition, a second set of associated critical factors needs to be considered: these involve predominantly IT (infrastructure and available bandwidth for connectivity and data movement, storage capacity, data protection, interoperability, digital health standards and regulations).

4 SCOPE OF WORK

The essential component of the solution and prerequisite for the actual digitisation of glass slides.

- Barcode scanning and printing facility to capture specimens, blocks and slides.
- Interface of barcode captured information with the laboratory information management system.
- A storage facility that allows for storage and retrieval of the scanned slides for a minimum of 7 days (server or scanner) and a minimum of 1 month using a cloud based system or equivalent) with possible extension of storage periods (A dedicated server for storage and retrieval of samples.
- Scanning and tracking of specimens throughout the histopathology workflow.
- Equipment (monitor with appropriate bidirectional interfacing with the storage facilities including the server and cloud-based storage where appropriate) to allow for the visualisation of stored images at the site of referral.
