3 BACKGROUND

The Automated Ampoule Filling and sealing machine is an advanced and highly efficient pharmaceutical equipment designed to automate the process of filling and sealing ampoules. This sophisticated machine is widely used in the pharmaceutical industry to insure precision, accuracy and hygienic packaging of liquid medications. The current ampoule filling and sealing machine at SAVP is not in line with the good manufacturing practice requirements, and the practice is more of a merely control and prevent products from being contaminated. It is comprised of a manual filling system which is at a high risk of cross contamination from both personnel and the environment. The new regulatory guideline stipulates that one that the manufacturer must use either an Isolator or restrictive access barrier system (RABS). In this case a RABS will be suitable for SAVP. Therefore, there is a need for an automated ampoule filling and sealing machine.
